Start watching for butterflies in your own backyard, in a park or greenspace, or along the side of a quiet rural road. Find wildflowers and you should find butterflies. Approach a butterfly quietly and carefully. Avoid casting a shadow across the insect. Do not try to handle it. Watch from a respectful distance, which is best done with binoculars. Zoom in with your camera as it feeds on a flower or rests on the ground. Learn more about individual species using the internet or a butterfly guide available from your local library or bookstore. Butterflies are considered by many to be among nature's crown jewels. . . . Enjoy the show!
